How it works

The connection to the FireFly allows for rapid evaporation of pretreat solution and a quick turn around to the digital output device.

- Simple to operate software for complete control of the Synergy and the FireFly from one panel
- Projection system provides the operator with a visual alignment tool for loading garments
- 2 sets of independent nozzles that are quick release to minimize downtime
- Optional integrated mixing system for using concentrated pretreat solution*
- Configured to spray two different pretreat solutions
- Transport belt from the Synergy system into the FireFly for continual operational flow
- Scheduled maintenance program
- API connections available
