

THREE LEVELS OF PRETREAT

PRETREATING IS A VITAL STEP IN THE DIRECT TO GARMENT PROCESS.

Pretreat is the key that unlocks printing on dark colored garments with rich, vibrant colors. It's the foundation that brings white ink to life. Without enough pretreat, your print can be dull, faded, and boring. Too much pretreat, and your ink could wash out after a few runs in the laundry. Uneven pretreat application can result in a design that's vibrant here, dull there, and washing out in-between.

It's important for any business that's serious about creating great prints to have a strong and reliable method of pretreating, and using a pretreat machine gives you the consistency and repeatability you need, no matter who is operating the machine.

With efficiency and effectiveness in mind, we've broken it down into 3 Levels of equipment, depending on the size of your business.

THREE LEVELS OF PRETREAT

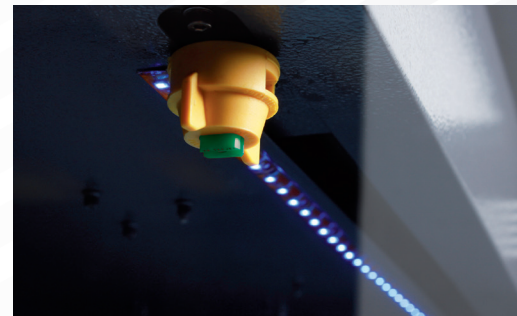

1

SMALL / HOME BASED BUSINESS

If you're interested in conserving space and not breaking the bank, the Schulze Basic is the way to go. With only one spray nozzle, it can't cover quite as much area as its big brother the Pretreatmaker IV, and you're limited in your ability to customize the spray pattern. But if you're working out of your garage or a small shop, you may find the small footprint (27.7" x 19.9" x 21.9") advantageous. This machine is best suited for a shop doing up to 750 garments a month.

HIGHLIGHTS

- Up to 750 garments/month
- Single spray nozzle
- Space efficient
- 15.7" x 17.7" spray area

THREE LEVELS OF PRETREAT

GTX

2

MEDIUM TO LARGE SIZED PRODUCTION SHOP

If you're printing more than 500 garments a month, you should look into the Schulze Pretreatmaker IV. The Pretreatmaker IV comes equipped with four nozzles to create an optimally even application of pretreat. You can select from 5 different customizable presets with the touch screen. The Pretreatmaker IV can also be equipped with a couple of optional upgrades, including an onboard scale for measuring fluid use and low supply warnings, and the option to integrate with barcode scanner.

HIGHLIGHTS

- > 500-4,000 garments/month
- Four spray nozzels
- 15.7" x 23.6" spray area
- One 10L and two 5L tanks

THREE LEVELS OF PRETREAT

GTX

3

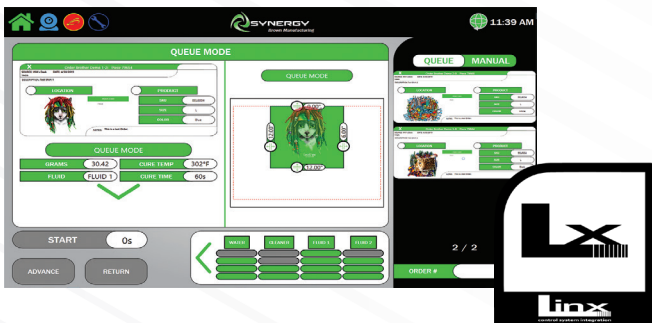

HIGH VOLUME MASS PRODUCTION

Time to bring out the big guns. If you're printing 2,000 or more shirts a month, you should explore the powerful features of the Synergy. The Synergy industrial pretreat module syncs up with the Firefly conveyor dryer so your high-volume shop can pretreat and cure shirts with a minimum number of operators. A single operator can start off producing up to 150 garments an hour with a Synergy and one heating section. Additional drones can be added to allow for up to 600 garments an hour with a single operator.

HIGHLIGHTS

- **Production scale:**
2,000+ garments/month
- **Expandable for increased production**
- **Barcode reading system**
- **Enabled with Linx automation software**
